Mold Busters - Seven Sample Jobs

Real jobs from our records, prepared for the hackathon teams: how an inspection works from first contact to payment. Client names, emails and phone numbers are removed.

Who we are

Mold Busters inspects homes and businesses for mold and air quality problems and removes mold. Based in Ottawa since 2005, working in Ontario and Quebec (and virtual inspections worldwide). Two kinds of inspection: an inspector visits the property, or a Virtual Assessment (VA) - a live video call in our app where the client shows the problem.

The seven jobs

#	Type	Place	Client	Booked by	Inspection	Paid	Client got	Estimate	Result
1	VA (video)	Montreal, QC	Tenant	Online	Sep 8, 2025	$100	Report + air-test estimate	$520 + tax	Not accepted
2	On-site	Smiths Falls, ON	Owner, selling	Client support	Sep 3, 2026	$107.35	Report + estimate + clearance report	$2,700 + tax	Done, paid $3,051
3	On-site	Laval, QC	Seller of the house	Client support	Aug 26, 2026	$224.20	Report + estimate + clearance report	$1,543 + tax	Done, paid $1,774
4	VA (video)	Pembroke, ON	Home builder	Online	Oct 20, 2026	$175.15	Report + estimate	$2,675 + tax	Accepted
5	VA (video)	Philadelphia, USA	Owner (USA)	Online	Aug 28, 2026	$125	Report + general quote	$0	Advice only
6	VA (video)	Stittsville, ON	Homeowner	AI agent (Zendesk)	Sep 2, 2026	Free	Estimate only	$1,495 + tax	Not accepted
7	On-site	Kanata, ON	Homeowner	Client support	Oct 6, 2026	$220.35	Report + estimate	$3,700 + tax	Not accepted

Each job folder has what exists for that job: the report(s) the client received, the estimate (rebuilt from FreshBooks), photos and videos, the inspector's raw notes from Telegram (Jobs 2-6), a 2-page Job_Story.pdf and job_timeline.json (the same data for code). Job 6 also has the Zendesk ticket and the client's photos. Free VAs get no report (Job 6).

How a job flows

#	Step	Who / which system
1	Lead comes in: website form, phone, email, SMS, VA booking page, Google	Zendesk, Dialpad, Acuity/Calendly, AI agents (Bruce)
2	Qualify: problem, location, owner or tenant	Client support team + email/voice AI agents
3	Book the inspection	Google Calendar (one per region + one for VAs), Acuity
4	Inspection: on site, or VA video call	Inspector; VA app (Brain)
5	Inspector posts raw notes, photos and a price	Telegram groups
6	Office writes the report and the estimate; invoice for the inspection	Brain (report), FreshBooks, email, Asana card
7	Follow up on the estimate	Close CRM SMS/email sequences + client support
8	Accept -> 40% deposit -> book the crew	FreshBooks, Calendar, Asana
9	Remediation, swab tests, clearance report, final invoice	Crew + supervisor; Brain; FreshBooks
10	Payment, review request, long-term follow-up	FreshBooks, Close CRM

Systems we use

System	What it does here
Brain	Our own internal CRM: reports, the VA video platform, clients
Telegram	Inspectors' raw notes, photos and prices right after each visit; field team chat
Google Calendar / Acuity	Bookings: one calendar per region + one for VAs; Acuity for online self-booking
Zendesk	Emails and website forms; our AI email agent Bruce answers here
FreshBooks	Inspection invoices, estimates, deposit and final invoices
Asana	One card per property: report -> payment -> project -> review
Close CRM	Leads, statuses, automated SMS/email follow-up
Dialpad	Phone calls and manual SMS

What we noticed while pulling these jobs together

Topic	What the records show
Same job, many systems	One job touches Google Calendar, Acuity, Zendesk, Brain (reports + video app), Telegram, FreshBooks, Asana, Close and Dialpad. The Asana card is created automatically with links to the other systems, but staff still update status by hand.
Raw notes -> documents	Inspectors post short raw notes, photos and a price in Telegram right after the visit. The office turns them into the report and the FreshBooks estimate. In Job 2 the short bullets became long paragraphs in the report; in Job 4 the inspector's text was used almost word for word. Job 3's clearance report even includes screenshots of the crew's Telegram messages. Prices sometimes change on the way: Job 3 $1,500 -> $1,543, Job 4 $2,600 -> $2,675.
How fast	VA: report out about 1.5 h after the call (Job 1) or the next day (Job 4). On-site: same day in Job 3 (Aug 26); 2 days in Job 7 (visit Oct 6, report Oct 8); 6 days in Job 2 (visit Sep 3, notes Sep 4, report Sep 8, sent Sep 9 after the $95 visit invoice was paid).
Who buys	3 of 6 priced estimates were accepted (Jobs 2, 3, 4). The two finished jobs (2 and 3) both started because of a house sale (a home inspector found mold; new owners asked for an inspection).
Free vs paid VA	Free VAs get an estimate only (Job 6). Paid VAs or the written-report add-on get a report (Jobs 1, 4, 5). VAs often end with an on-site visit to confirm the scope before the work (Job 4).
Follow-up and upsell	Close CRM sends automated SMS sequences after every estimate (reminders, 10% off, 'should we close your case?'), add-on offers after booking (whole-home treatment $600) and review requests after payment.
AI already in use	Bruce (AI email agent) qualified and booked Job 6 in 37 minutes with no human. Calendar bookings get an automatic AI 'financial analysis' of the area.
Videos and photos	Older VA recordings show each camera as a tiny tile (Job 1); newer ones show the client's camera full size (Jobs 4, 6). Recordings live in Brain and Telegram, not attached to the job. The recording for Job 5 could not be found.
Data that does not match	Close stores VA times in UTC (11:30 AM shows as 3:30 PM). Job 7's report lists a different inspector than Asana/FreshBooks. Job 4's report shows the inspection date as 'December 31, 1969' - Brain's default date, which appears when the date is missing. Job 5's report has an empty photo section. Booking forms accept anything (Job 5 phone field: 'PAM').
Expectations	Job 2: the client booked a $95 scope visit but expected a 3-5 h full home inspection 'as advertised on the website'. The inspector says this is not the first time.

Times are Eastern (Ottawa/Montreal). Addresses are real; client names, emails and phone numbers are removed.
