### - Indoor Air Quality Assessment

Indoor air quality assessment to confirm or deny the presence of mold, and other airborne particles.

Individual 75L samples of air will be collected and sent to a third-party, accredited laboratory that specializes in microbial analysis.

During the sampling procedure, a visual inspection may be performed to supplement, and assist in interpreting the pending laboratory results. This non-invasive inspection may include the use of thermal imaging, moisture readings, temperature/humidity/dew point measurements, and other diagnostics on an as-needed basis, determined by the technician on site.

A comprehensive result summary to be included once all of the data has been received.

Deliverables (i.e., reports, estimates, etc.) may be delayed if appointment payments are outstanding. Full payment is required prior to receiving reports or laboratory results.
